

**COLLEGE OF AGRICULTURE
AND LIFE SCIENCES**

**COMMUNICATIONS &
CYBER TECHNOLOGIES**

Below are offerings from CCT. Please check any desired services.
See <http://cct.cals.arizona.edu> for more information

Check (X)	Service	Description
	Web Development	CCT designs and develops departmental and grant-based websites using content management systems (such as Drupal), as well as GIS and web-based mapping applications, mobile applications, and online curriculum
	Web/Native Mobile App Development	CCT designs and develops mobile applications that are specifically targeted for iOS or Android devices, built using native OS languages or HTML5
	Web and/or Database Hosting	Hosting for Drupal, Wordpress, Joomla, or custom PHP, Python, ASP.Net and ColdFusion web applications.
	Virtual Server Infrastructure	A dedicated Linux or Windows server that allows you to install any web, database, or statistical software. Your application(s) will be hosted separately from the rest of the College's web applications, providing greater performance, dedicated RAM, and additional disk space. You will get full administrative access to the server and a suite of web-based monitoring tools.
	Research Computing Consulting Services	CCT provides tailored support for building out virtual servers on CCT or CyVerse cyberinfrastructure, developing scripts to be executed as jobs on the HPC or HTC.
	Graphic Design Services	Need to create a logo, newsletter, magazine, marketing material, or annual report? Our graphic design staff will collect your photos, charts, and logos and arrange them within your document to give it a professional look and feel, that is unique to your work but can incorporate elements of the UofA Brand. Work includes posters, flyers, pamphlets, and infographics.
	Video Production	CALS CCT offers a full range of video production. Is your research team interested in exploring the possibilities of telling your compelling story to the public? Or would you rather target your outreach to tightly integrated video and web design projects that you can use to reach specific users or funding sources? In either case, our Emmy Award-winning video team can bring your message to life and get it the audience that needs to see it.
	Classroom and Conference Technology Support	CCT provides support for online collaboration and Audio/Visual tools to be used in grant planning, distance education, lecture capture and conference recording.
