

Agricultural Systems/Climate Change Mitigation Post- Doctoral Fellow or Associate Scientist

Achieving sustainable food security in a world of growing population and changing diets is a major challenge under climate change. The International Maize and Wheat Improvement Center (CIMMYT) is looking for an innovative, results-oriented young scientist with excellent skills in agricultural systems analysis and modeling. The scientist will work as a member of CIMMYT Global Conservation Agriculture Program (CIMMYT-GCAP), and will play a key role in a large multi-disciplinary and multi-institutional team. The selected scientist will work closely with CIMMYT's research teams in the different regions where systems research is conducted, as well as partners in advanced research institutes, national research programs, and the CCAFS (CGIAR Research Program on Climate Change, Agriculture and Food Security) community. He/she will be responsible for evaluating the potential impact, in the Indo Gangetic plains, of improved agricultural management practices, including conservation agriculture, to mitigate climate change. The position is supported by the CGIAR Research Program (CRP7-CCAFS) and other donors.

Primary responsibilities include:

- Analysis of the impact of agricultural management practices on GHG emissions at various scales
- Identify data gaps at field scales and liaise with GCAP agronomists to upgrade (design/instrumentation) on-going and future field experimentation to include GHG monitoring
- Collect and organize secondary relevant data at broader scales for outscaling field scale findings
- Coordinate with climate change adaptation colleagues for coherent approaches
- Interact with CCAFS community to ensure harmonization and standardization of approaches
- Develop scenario analysis in relation to drivers of changes and incentives and disincentives
- Liaise with socio-economic and policy scientists to develop policy briefs related to climate change mitigation

We are seeking candidates with the following qualifications:

- PhD in agriculture, ecology, biology, environmental science, or a related field
- Solid background in modeling, statistics, bioinformatics and multi-scale analyses of agricultural/environmental systems and/or in life cycle assessments
- Ability to develop conceptual frameworks for analyzing complex problems at various spatial and temporal scales
- Field based knowledge and capability to design/conduct field experiments and instrumentation related to Carbon and/or Nitrogen measurement and fluxes will be an asset
- Good peer-review publication record
- Good communication skills
- Ability to work in a multi-disciplinary/multi-cultural team on trans-disciplinary issues
- Willingness to travel frequently

CIMMYT is a non-profit agricultural research institute committed to ensuring food security and reducing poverty in developing countries. Through strong science and effective partnerships, CIMMYT creates, uses and shares knowledge and technology to improve the productivity and profitability of wheat and maize farming systems and to sustain natural resources.

While relatively small with a budget of less than US\$100 million and 800 employees, CIMMYT has had enormous impact in the developing world. It is the center of excellence for work on two of the three most important food crops in the developing world. Its most famous employee, Dr. Norman Borlaug, is credited by many with saving more lives than any other individual in the history of the world. Borlaug's work dramatically increased yields of wheat in the Indo-Gangetic plains in the 1960s and 1970s, staving off starvation for hundreds of millions. For this work, Borlaug received the Nobel Prize in 1970. Scores of other CIMMYT efforts have saved or enriched millions of lives, from releasing disease-resistant varieties and varieties resistant to drought and heat and soil deficiencies, to dispersing techniques to reduce farmer costs and post-harvest losses. In developing countries, wheat varieties developed by CIMMYT and its partners cover 75% of the area planted to modern wheat varieties.

The position will be based either at CIMMYT headquarter office in El Batán, Mexico, in Delhi or in Hyderabad, India. The position is for an initial fixed-term contract of 3 years, after which further employment is subject to performance. CIMMYT offers an attractive remuneration package paid in US dollars, with a range of benefits including housing allowance, life and health insurance, education allowance (to Grade 12), home leave, retirement fund, and relocation shipping assistance.

CIMMYT is an equal-opportunity employer and strives for staff diversity in gender and nationality.

[Apply online](#) no later than **December 15th, 2011.**
