

# PLG/GEOG 301

## Introduction to REGIONAL PLANNING

**Online Course:** 3 credit hours

**Spring Semester:** 1/11 - 5/2/2012

**Instructor:** Ladd Keith  
*School of Landscape  
Architecture & Planning*

Creating a sustainable region is one of the major challenges in the planning profession. This course is an introduction to the principles and techniques used for regional planning in metropolitan and rural areas.

Topics explored include:

- Land use & transportation
- Sustainability
- Climate change & energy
- Food systems
- Economic development
- Megaregions

Students will have the opportunity to understand and practice a range of skills and tools needed to address real-world problems in regional planning.

*"This was a very enjoyable class. I had limited experience about the topic, but Mr. Keith made learning the material relevant to all students, experienced or not."*

*"This comprehensive course gives you an introductory into the multi-faceted world of urban planning. As an online course, it was by far one of the most straightforward I've ever had and encourages your own opinions and formulation to the current issues in planning."*
