

## **NEW SUMMER COURSE**

ECOL 326- Genomics

Summer session 1

6/8- 7/9

### Course Description:

Introduction to the study of genomics and its relevance to molecular, cellular and organismal biology, human health and disease. This course integrates readings and discussions of current topics, and exercises that apply web-based computational tools for genome analysis

Upper division science units offered this summer about an exciting new field in Biology! The course includes discussions on the current issues and ways genomic data can be used in health care and other systems !
