

Course MCB 422 offered summer 2016!

What is MCB 422?

A lecture/computer lab course that teaches you fundamental concepts in genetics and their applications. In addition you will learn about modern techniques in genetics including CRISPR and RNAi.

Why should I take MCB 422?

This course could provide you with valuable experience for the following;

- postgraduate degrees in genetics, in particular genetic counseling.
- medical and veterinary school.

For certain undergraduate and some future postgraduate degrees MCB422 may fulfill your biology laboratory requirements.

MCB422 is now offered during the first summer session June 6th-July 7th 2016 as well as during the fall and spring semesters.
