

Research Technician/Trainee – Crop Physiology

A full-time summer position is available at the Pennsylvania State University to participate in crop physiology research in Willcox Arizona. On site room and board available. Duties include data collection focusing on the response of maize and common bean to drought. Trainee will learn methods to monitor soil and plant water status, leaf gas exchange, root architecture and anatomy, in teams with PhD students. Position will begin in May and end in August. University coursework in plant biology and soil science required. Please contact Dr. Jonathan Lynch, JPL4@psu.edu
