Science Corps

Paid Fellowship Abroad to Teach Science!

Are you a recent or soon-to-be PhD graduate? Would you like to spend up to six months making a difference by developing and teaching science curriculum abroad?

Science Corps offers **fully paid fellowships** to upcoming and recent PhD graduates (up to four years after graduation) to help build science capacity at one of our host locations in the Philippines, Morocco, Bangladesh, and India. We are also currently developing new site partnerships, and are open to a fellow interested in working on site development.

Fellows travel to partner institutions to develop science curriculum, teach in secondary school classrooms, and build community-based research projects. In addition to building science capacity at these host locations, we also aim to offer fellows a life-changing experience. They are given the opportunity to **spend time in beautiful locations, immerse themselves in different cultures, and learn from their host educators—all while making positive contributions to these communities.**

The deadline for this application round is **September 30th**, but we still encourage you to contact us if you would like to be considered for a later appointment.

To find out more about us and apply, please go to
